PROFESSIONAL SUMMARY

MSc Data Science candidate at the University of Bristol with experience in machine learning, statistical modelling, experimentation, and large-scale data analysis, as well as business intelligence and reporting, to solve real-world problems. Skilled in Python, SQL, and AWS, with experience building predictive models, analysing complex datasets, and translating insights into actionable recommendations through academic and industry projects. Comfortable operating across the data science-to-analytics spectrum: model building and evaluation on one end, visualising and stakeholder communication on the other. Seeking graduate opportunities in Data Science, Data Analytics, or Business Intelligence. Open to relocation and eligible to work in the UK.

TECHNICAL SKILLS

Programming & Databases: Python (Pandas, NumPy, Scikit-learn, Matplotlib), SQL, R, Oracle SQL

Machine Learning & Statistics: Feature Engineering, Time Series Forecasting, Hypothesis Testing, A/B Testing, Data Interpretation, Statistical Modelling

Data Engineering: ETL Pipelines, Data Integration, Data Cleaning

Visualisation & BI: Power BI, Tableau, Excel, KPI Reporting

Cloud & Automation: Git, AWS, Terraform Cloud, Streamlit

EDUCATION

University of Bristol, MSc Data Science

Bristol, United Kingdom | Sept 2025 –

Present

Relevant Coursework: Machine Learning, Statistical Computing and Empirical Modelling, Large-Scale Data Engineering, AI and Text Analytics, Visual Analytics.

SRM Institute of Science & Technology, B.Tech. Electronics & Communication

Chennai, India | 2019 – 2023

GPA: 9.21/10

WORK EXPERIENCE

Tata Communications — Engineer, Global IP & Ethernet

Chennai, India | July 2023 –

March 2025

- Automated network monitoring workflows using Python and REST APIs, replacing manual checks across enterprise-scale IP and Ethernet infrastructure.
- Worked with routing, switching, and AWS cloud services to support enterprise-scale network operations and customer network solutions.

Mentor Minds — Data Analyst Intern

May 2023 –

June 2023

- Developed weekly Power BI reports and KPI dashboards tracking eight key business performance metrics for stakeholder review.
- Built SQL & Python ETL pipelines integrating customer behaviour data from three data sources to support business improvement recommendations.

PROJECTS & RESEARCH

Forecasting Sport & Physical Activity Participation Using Machine Learning with London Sport

In Progress, 2026

- Developing an end-to-end machine learning / analytics pipeline using Sport England's Active Lives Survey to analyse participation trends across London's 32 boroughs.
- Applied unsupervised clustering to segment demographic groups and identify underserved populations; building Random Forest, Prophet, and ARIMA models for borough-level forecasting.
- Presenting borough-level projections and visualisations to support evidence-based strategic planning for a live external partner, London Sport.

Customer Retention Prediction System

- Developed an end-to-end machine learning pipeline to predict customer churn for a banking dataset, achieving 84.75% accuracy and 0.85 ROC-AUC using Logistic Regression and Random Forest.
- Deployed findings as an interactive Streamlit application for stakeholders to explore churn risk by segment.

UK Housing Price Analysis

- Built a predictive analytics pipeline comparing Linear Regression and Random Forest models to predict UK housing prices, evaluated using RMSE.
- Delivered results through an interactive Tableau dashboard, finding London prices nearly 3x higher than other UK regions.

Renal Disease Prediction Using Machine Learning and Medical Imaging Approaches- [IEEE](#)

Built an XGBoost classification model predicting kidney disease status from clinical parameters; co-authored research published in IEEE Xplore.
